

# websites

If you're not a click away, you're making it easy for your competition. Your clients are all about immediacy and they want to access information about you quickly and easily from the comfort of their very own browsing spot.

You don't have to be fancy, you just have to be **there**. Home, contact, background - that gets you started, at least. Add some testimonials, pictures, even a **buy now** button and you'll be well on your way. Upgrade from your generic email address to something custom and easy to remember. Keep it consistent with your website and your marketing. Look professional and serious about what you're doing.

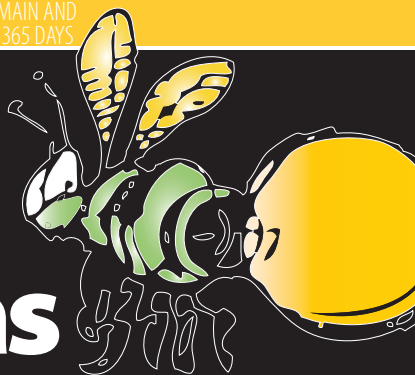

If you're ready to **claim your little spot** on the world wide web, we're ready to help you.

Let's get started with something simple, get the basics down and make sure your customers aren't clicking on your competition anymore. We'll get you up and running quickly and easily. We'll get you a site that's all your own — **unique, creative and clean**. You'll have a new email address to add to your business cards (which we can help you with too) and you too, will just be a click away.

**\$300 gets you started** with a simple site (home, contact & faq or background), hosting and domain registration for a year. We'll set up an email address to go with your new site, a counter so you can track who's visiting and register you with google, so your site shows up in searches. Looking for a little more? For **\$500** you'll get all the same, with another couple of pages - maybe testimonials, maybe a portfolio, maybe a form your clients can use to add themselves to your newsletter list. We can customize your website to your needs.

Already have a website? **Time for a re-vamp?** We can help!

**STARTING AT \$300** INCLUDES DOMAIN AND HOSTING FOR 365 DAYS
